

## Innersource : how opensource spirit is spreading among big corp

Bertrand Parpoil, Vincent Picavet, FOSS4G 2021  
[infos@oslandia.com](mailto:infos@oslandia.com)

# OpenSource : back to the roots

2

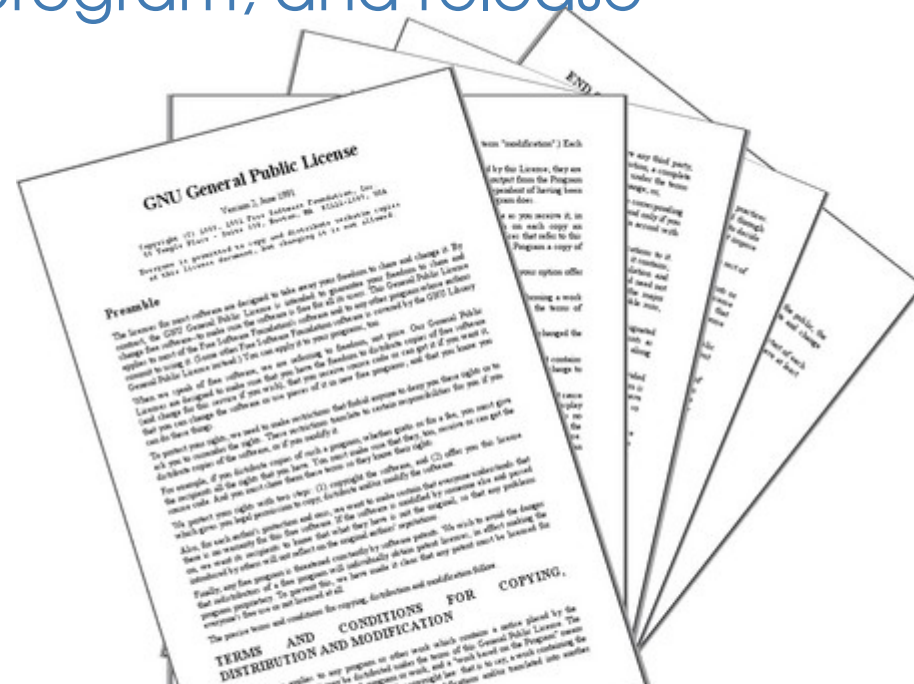

## 4 Essential freedoms

#0 : The freedom to run the program for any purpose.

#1 : The freedom to study how the program works, and change it to make it do what you wish.

#2 : The freedom to redistribute and make copies

#3 : The freedom to improve the program, and release your improvements

# Write software ?

What is a software ?

code, documentation, devops, infra, design material, other resources...

How do we do that ?

give **feedback**, **help** new users, **recommand** the project to others, **test** and report bugs, ask for new **features** and specify them, **code** and update the software, create infographics, write and update the **documentation**, **translate** the software, maintain the **infrastructure**, execute **admin** burdens...

```
if ($(window).scrollTop() > header1_initialDistance) {  
  if (parseInt(header1.css('padding-top'), 10) == header1_initialPadding) {  
    header1.css('padding-top', '' + $(window).scrollTop() - header1_initialDistance + header1_initialPadding + 'px');  
  }  
} else {  
  header1.css('padding-top', '' + header1_initialPadding + 'px');  
}  
  
if ($(window).scrollTop() > header2_initialDistance) {  
  if (parseInt(header2.css('padding-top'), 10) == header2_initialPadding) {  
    header2.css('padding-top', '' + $(window).scrollTop() - header2_initialDistance + header2_initialPadding + 'px');  
  }  
} else {  
  header2.css('padding-top', '' + header2_initialPadding + 'px');  
}
```

# Opensource - roles

## Roles in a community

- users
- contributors
- committers

## Managers

Project founder(s)

Designated by the community

(through vote, PSC...)

**Transition from a role to another :**  
through technical rights and acknowledgement of work and actions

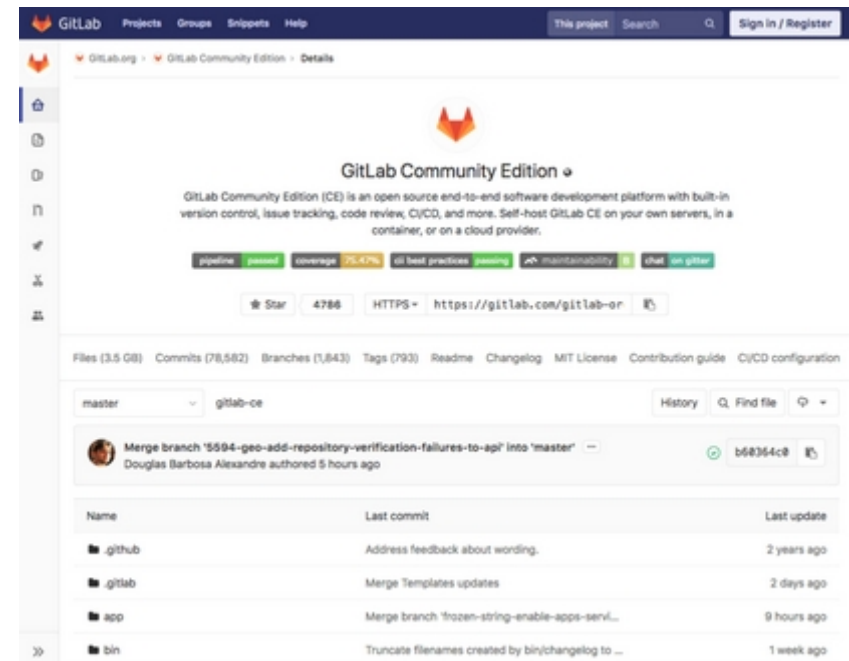

**Peer review and recognition → individual appreciation**

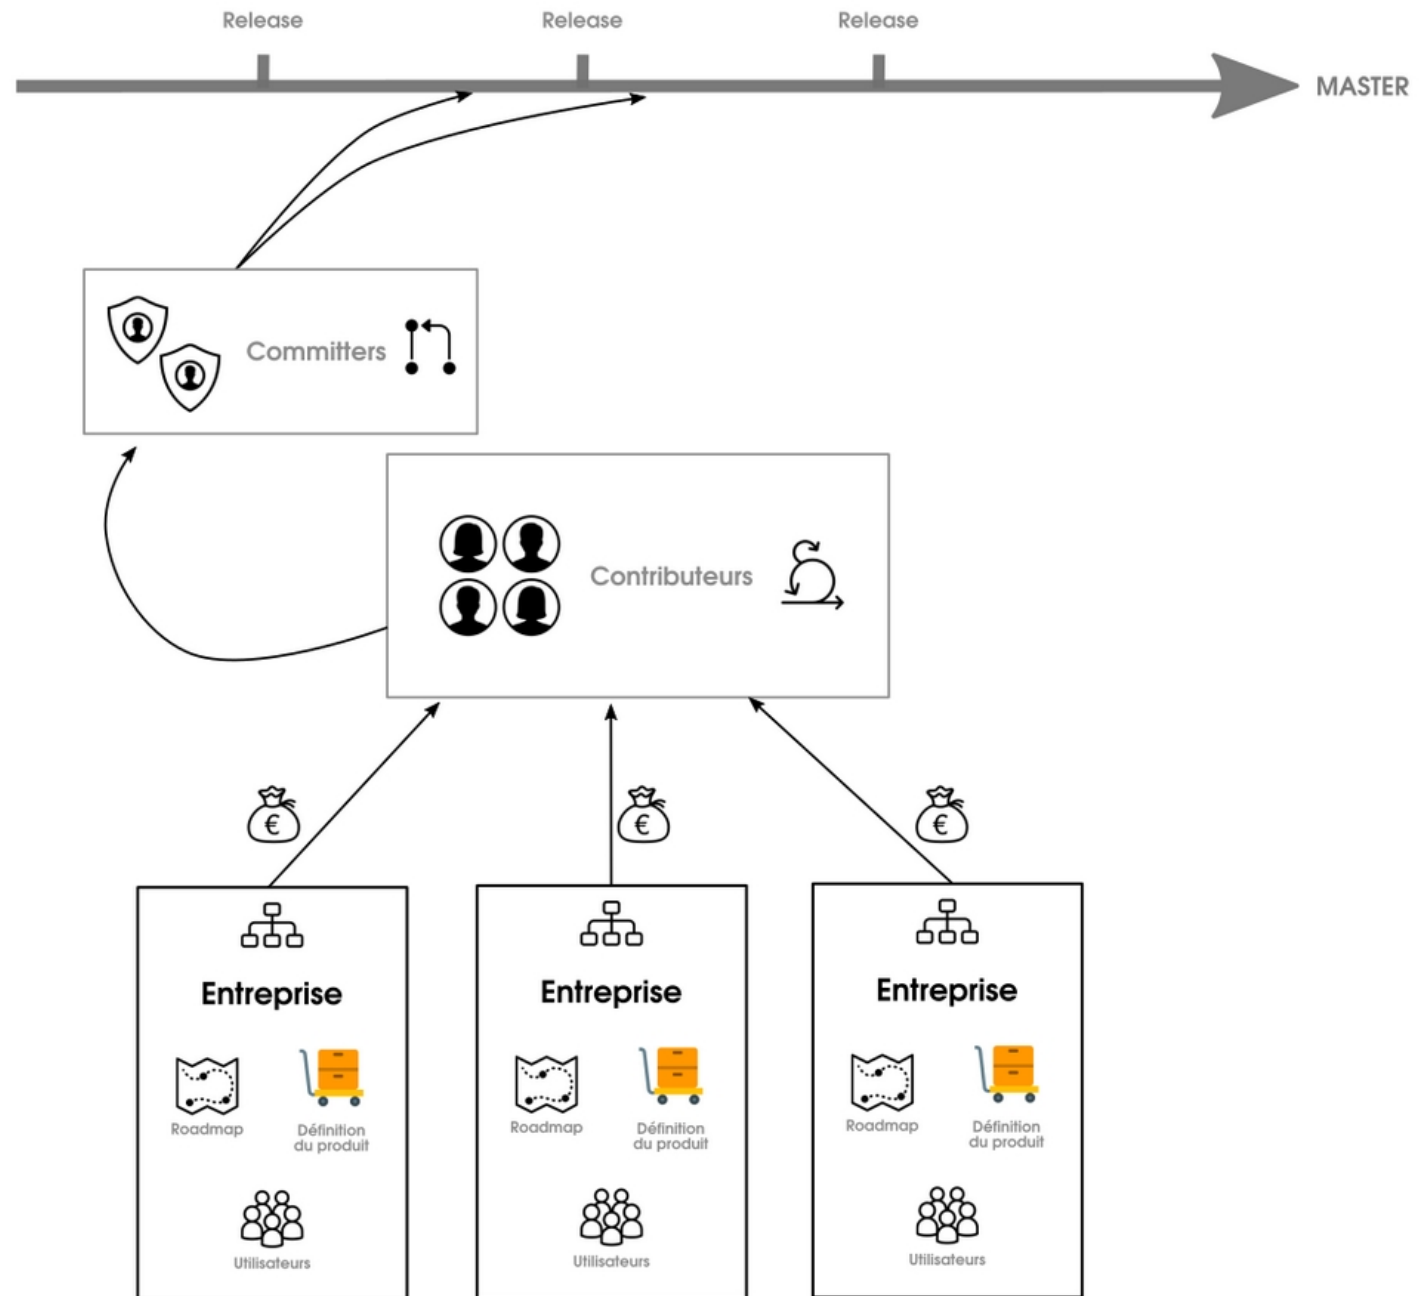

# Organization & characteristics

## Opensource organization characteristics

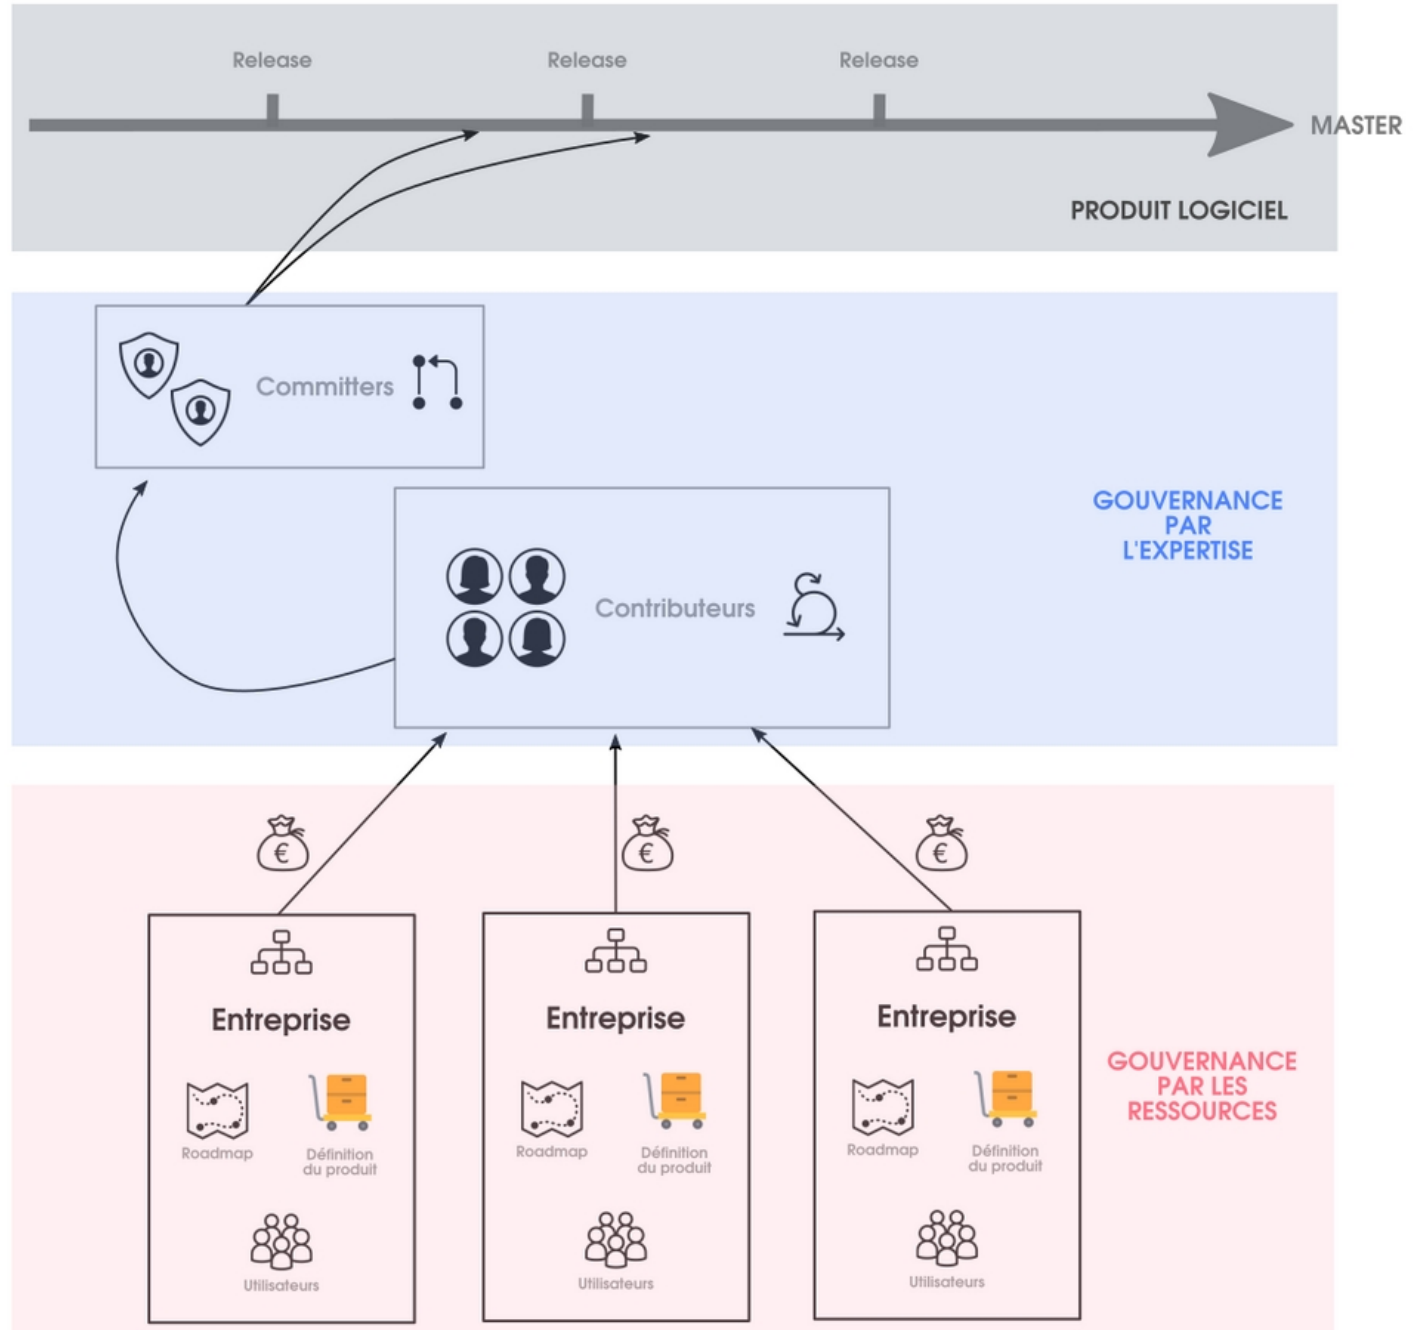

- distributed ( worldwide )
- Organic
- Self-organized
- Iterative
- Based on meritocracy
- Tooling
  - Written culture
  - GitLab / GH, Mailing lists, chats...

# Organization

# Organization

# Example project : Linux

## Linux kernel

- > 15K contributors, Organized as network
  - ➔ *Linus Torvalds*
    - *~12 trusted lieutenants*
    - *developers*
    - *The opensource community*
- Individuals detain power, not companies
- Process :
  - → *patches, reviews*
  - → *Torvalds | Morton review, change, commit*
  - → *Tests*
- Stables and experimental versions

## QGIS Desktop GIS

- ~400 contributors
- Organized as a community
- OSGeo Foundation
  - *PSC*
- QGIS.org : swiss non-profit org.
- Backlog managed by contributors,  
*in fine* by funders

«The use of open source software development best practices and the establishment of an open source-like culture within organizations for the development of its software and for innovation.»

**Innersource != OpenSource**

## **Transparency**

Open access to code, design, decisions, communication

## **Collaboration**

Explicit processes, written culture, shared tools

## **Auto-organization**

Create a frame

Allow auto-organization within that frame

## **Meritocracy / do-ocracy**

### ***Those who commit pilot the product's evolution***

Steering software through contribution and technical skills

Proove and measure

Incitation to commit

Peer-review, votes, constructive attitude

## **Measure**

Identify KPI and measure them

e.g. # merged PR, time-to-merge, #contributors...

# ... why ?

## Why adopt Innersource ?

- Time-to-market velocity
- Break silo effect
- Software quality
- Documentation quality
- Cost reduction
- Better innovation
- HR attractiveness

# ... who ?

They started more than 20 years ago : 2000 !

## IBM

*Development velocity increased 30%*  
*Better creativity and innovation*

## Philipps

*Technology reuse improvement*  
*Software quality mprovement*  
*Reduced Time-to-market*

## Zalando

*Innersource AND OpenSource*

State of open source at Zalando 2018 Report is now available

# ... who ?

Large organizations dive in !

Engie, Thalès, Autodesk, Société générale, SAP, Nokia...  
HP, Lucent, DTE, Google, Microsoft, PayPal, Walmart, T-Mobile...

## **Inner Source ou quand les entreprises se réinventent en communautés open source**

par Alain Clapaud, le 05 juin 2019 13:23

Les communautés open source intéressent de plus en plus les DSI et pas uniquement pour aller vers l'Open Source : cette nouvelle organisation du travail des développeurs peut être transposée en entreprises ! C'est ce que l'on nomme l'Inner Sourcing.

## **Microsoft is going all-in on 'Inner Source'**

Microsoft is staffing up an internal Inner Source initiative to bring open source principles, methodologies and tools for use by development teams inside the company.

## **10 steps to innersource in your organization in 2017**

Is your company planning to implement innersource concepts in 2017? We walk through steps for getting started.

05 Jan 2017 | Jono Bacon | 312 | 5 comments

## Inter-company WG

→ Created by Florent Zara ( Henix )

→ Big corp.

Engie, Thalès, Société générale  
Véolia, PSA, SNCF...

→ Communicate among peers

THALES

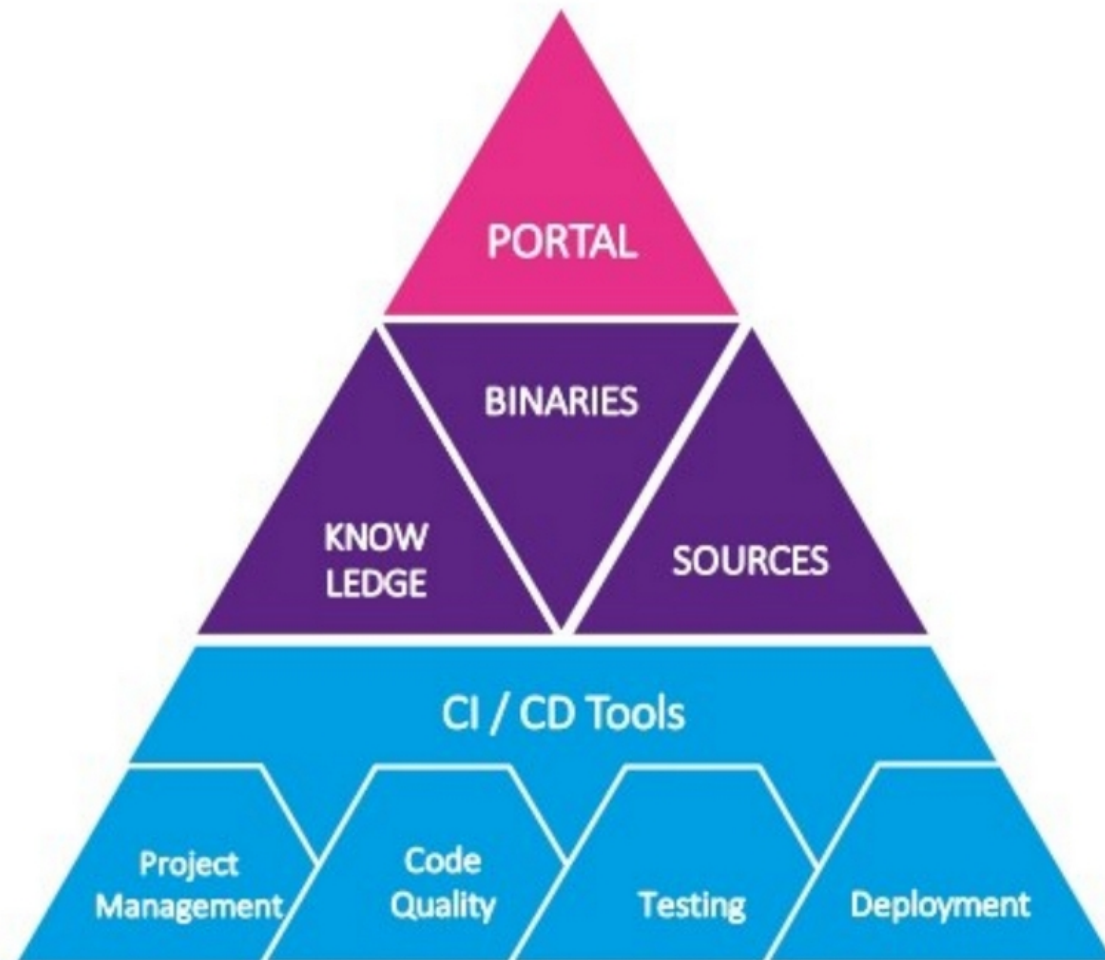

# How to ?

Multiple approaches according to priority goals

3 Pillars :

- Production
- Sharing
- Communication

## Continuous integration

- Project management
- Quality
- Tests
- Deployment

## Set of tools

# Sharing

---

## Transversal sharing through the company

- Binaries
- Code
- Documentation
- **Knowledge**

Delete entry barriers

Create internal communities ( “tribes” )

# Communication

Internal Innersource portal

Internal community management

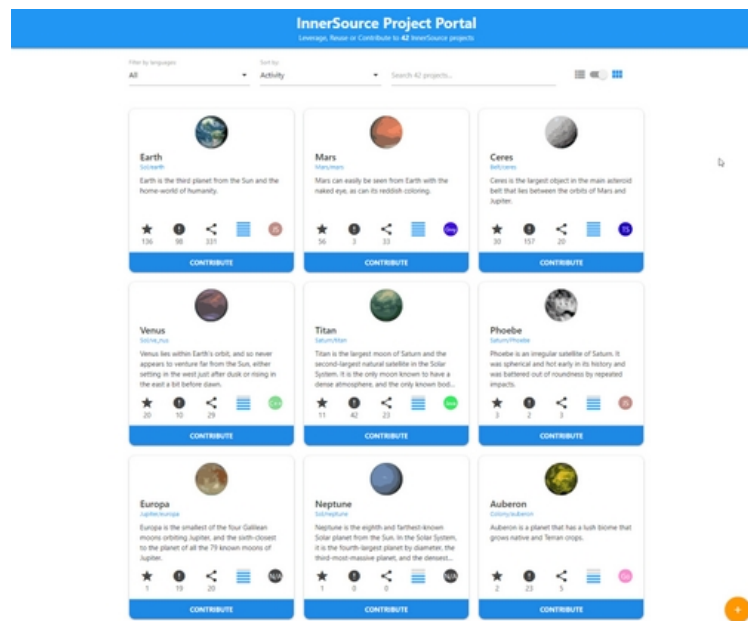

Internal communication

External communication

→ Conferences

→ Blogs

→ ...

# Warning points

---

Licences ( needs specific licences )

Social and fiscal laws and issues

Sensitive code or data

Investment needed

→ Not just “throw everything on GH”

Innersource = path towards OpenSource ?

# Innersource : good or bad ?

# BAD

~~OpenSource~~

Open-Washing risk

More “almost-open”  
licences =>  
confusion

Failed innersource  
projects => bad  
image for OS

Drains opensource  
developers to closed  
source dev

# GOOD

- Culture change => no return
- Prove quality of OpenSource dev methods
- Ramp up to OpenSource programs
- Train new developers to OS culture
- Better understanding of OS ecosystem
  - => more collaboration & funding with OS projects
- Large companies => large budgets

**Opinion : good, spread it !**

## Innersource : how opensource spirit is spreading among big corp
